Randomness and Statistics

with Eirik

What will we cover?

This section is all about generating random numbers and calculating statistics in NumPy.

What will we cover?

This section is all about generating random numbers and calculating statistics in NumPy.

Content

We will learn to:

1. Generate random integers in NumPy.

What will we cover?

This section is all about generating random numbers and calculating statistics in NumPy.

Content

We will learn to:

1. Generate random integers in NumPy.
2. Shuffle an array and choose numbers from an array.

What will we cover?

This section is all about generating random numbers and calculating statistics in NumPy.

Content

We will learn to:

1. Generate random integers in NumPy.
2. Shuffle an array and choose numbers from an array.
3. Create and plot normally distributed vectors.

What will we cover?

This section is all about generating random numbers and calculating statistics in NumPy.

Content

We will learn to:

1. Generate random integers in NumPy.
2. Shuffle an array and choose numbers from an array.
3. Create and plot normally distributed vectors.
4. Calculate means, variances, and medians.

What will we cover?

This section is all about generating random numbers and calculating statistics in NumPy.

Content

We will learn to:

1. Generate random integers in NumPy.
2. Shuffle an array and choose numbers from an array.
3. Create and plot normally distributed vectors.
4. Calculate means, variances, and medians.
5. Find the unique values in an array.

What will we cover?

This section is all about generating random numbers and calculating statistics in NumPy.

Content

We will learn to:

1. Generate random integers in NumPy.
2. Shuffle an array and choose numbers from an array.
3. Create and plot normally distributed vectors.
4. Calculate means, variances, and medians.
5. Find the unique values in an array.

Exercise Set

In the exercise set for this section, we will work with linear regression.
