Advanced Linear Algebra

with Eirik

What will we cover?

This section is all about the more advanced aspects of linear algebra in NumPy.

What will we cover?

This section is all about the more advanced aspects of linear algebra in NumPy.

Content

We will learn to:

1. Find eigenvalues and eigenvectors of a matrix.

What will we cover?

This section is all about the more advanced aspects of linear algebra in NumPy.

Content

We will learn to:

1. Find eigenvalues and eigenvectors of a matrix.
2. Recognize diagonal, orthogonal, and upper-triangular matricies.

What will we cover?

This section is all about the more advanced aspects of linear algebra in NumPy.

Content

We will learn to:

1. Find eigenvalues and eigenvectors of a matrix.
2. Recognize diagonal, orthogonal, and upper-triangular matricies.
3. Perform the QR decomposition of a matrix.

What will we cover?

This section is all about the more advanced aspects of linear algebra in NumPy.

Content

We will learn to:

1. Find eigenvalues and eigenvectors of a matrix.
2. Recognize diagonal, orthogonal, and upper-triangular matricies.
3. Perform the QR decomposition of a matrix.
4. Use NumPy's built in exception called LinAlgError.

What will we cover?

This section is all about the more advanced aspects of linear algebra in NumPy.

Content

We will learn to:

1. Find eigenvalues and eigenvectors of a matrix.
2. Recognize diagonal, orthogonal, and upper-triangular matricies.
3. Perform the QR decomposition of a matrix.
4. Use NumPy's built in exception called LinAlgError.
5. Find the closest thing to a solution with least squares.

What will we cover?

This section is all about the more advanced aspects of linear algebra in NumPy.

Content

We will learn to:

1. Find eigenvalues and eigenvectors of a matrix.
2. Recognize diagonal, orthogonal, and upper-triangular matricies.
3. Perform the QR decomposition of a matrix.
4. Use NumPy's built in exception called LinAlgError.
5. Find the closest thing to a solution with least squares.

Exercise Set

In the exercise set, we will (among other things) work with quadratic approximations.
