Understanding ndarrays

with Eirik

What will we cover?

This section is all about working with and understanding general ndarrays in NumPy.

What will we cover?

This section is all about working with and understanding general ndarrays in NumPy.

Content

We will learn to:

1. Become comfortable with higher dimensional arrays.

What will we cover?

This section is all about working with and understanding general ndarrays in NumPy.

Content

We will learn to:

1. Become comfortable with higher dimensional arrays.
2. Slice, Boolean index, and use aggregate functions on 3D-arrays.

What will we cover?

This section is all about working with and understanding general ndarrays in NumPy.

Content

We will learn to:

1 Become comfortable with higher dimensional arrays.

2 Slice, Boolean index, and use aggregate functions on 3D-arrays.

3 Work with colored images as examples of 3D-arrays.

What will we cover?

This section is all about working with and understanding general ndarrays in NumPy.

Content

We will learn to:

1. Become comfortable with higher dimensional arrays.
2. Slice, Boolean index, and use aggregate functions on 3D-arrays.
3. Work with colored images as examples of 3D-arrays.
4. Understand strides of a general ndarray.

What will we cover?

This section is all about working with and understanding general ndarrays in NumPy.

Content

We will learn to:

1. Become comfortable with higher dimensional arrays.
2. Slice, Boolean index, and use aggregate functions on 3D-arrays.
3. Work with colored images as examples of 3D-arrays.
4. Understand strides of a general ndarray.
5. Explain why slicing and transposing are cheap operations.

What will we cover?

This section is all about working with and understanding general ndarrays in NumPy.

Content

We will learn to:

1. Become comfortable with higher dimensional arrays.
2. Slice, Boolean index, and use aggregate functions on 3D-arrays.
3. Work with colored images as examples of 3D-arrays.
4. Understand strides of a general ndarray.
5. Explain why slicing and transposing are cheap operations.

Exercise Set

In the exercise set for this section, we will work with colored images.
